# Why Energy & Commodities

Christiaan ter Keurs, Financial Advisor

### •••• About Us

#### Christiaan ter Keurs, Financial Advisor

Christiaan ter Keurs has been advising and helping investors realize their financial objectives over the past 18 years. His sophisticated knowledge of economics and financial markets provides his clients with the capability to understand how world events affect their investments.

He is dedicated to creating and implementing comprehensive financial roadmaps that allow clients to accumulate, manage and transfer their wealth. His broad network of global connections also makes him an ideal contact for entrepreneurs and business owners exploring venture opportunities.

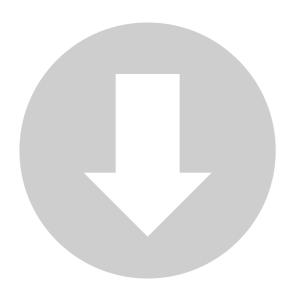

### •••• Commodities

Why the timing is right

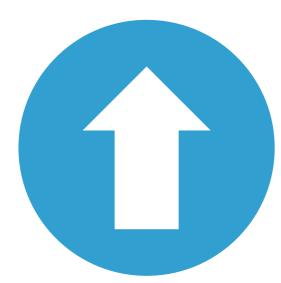

#### Macro Economic

- 3.7 billion people growing towards middle class
- Negative real interest rates
- Declining purchasing power of money

#### Mining

- Mine supply is decreasing (large mines are closing)
- Global infrastructure spending to reach \$57 trillion by 2030
- Senior producers cash flow multiple at multi decade low

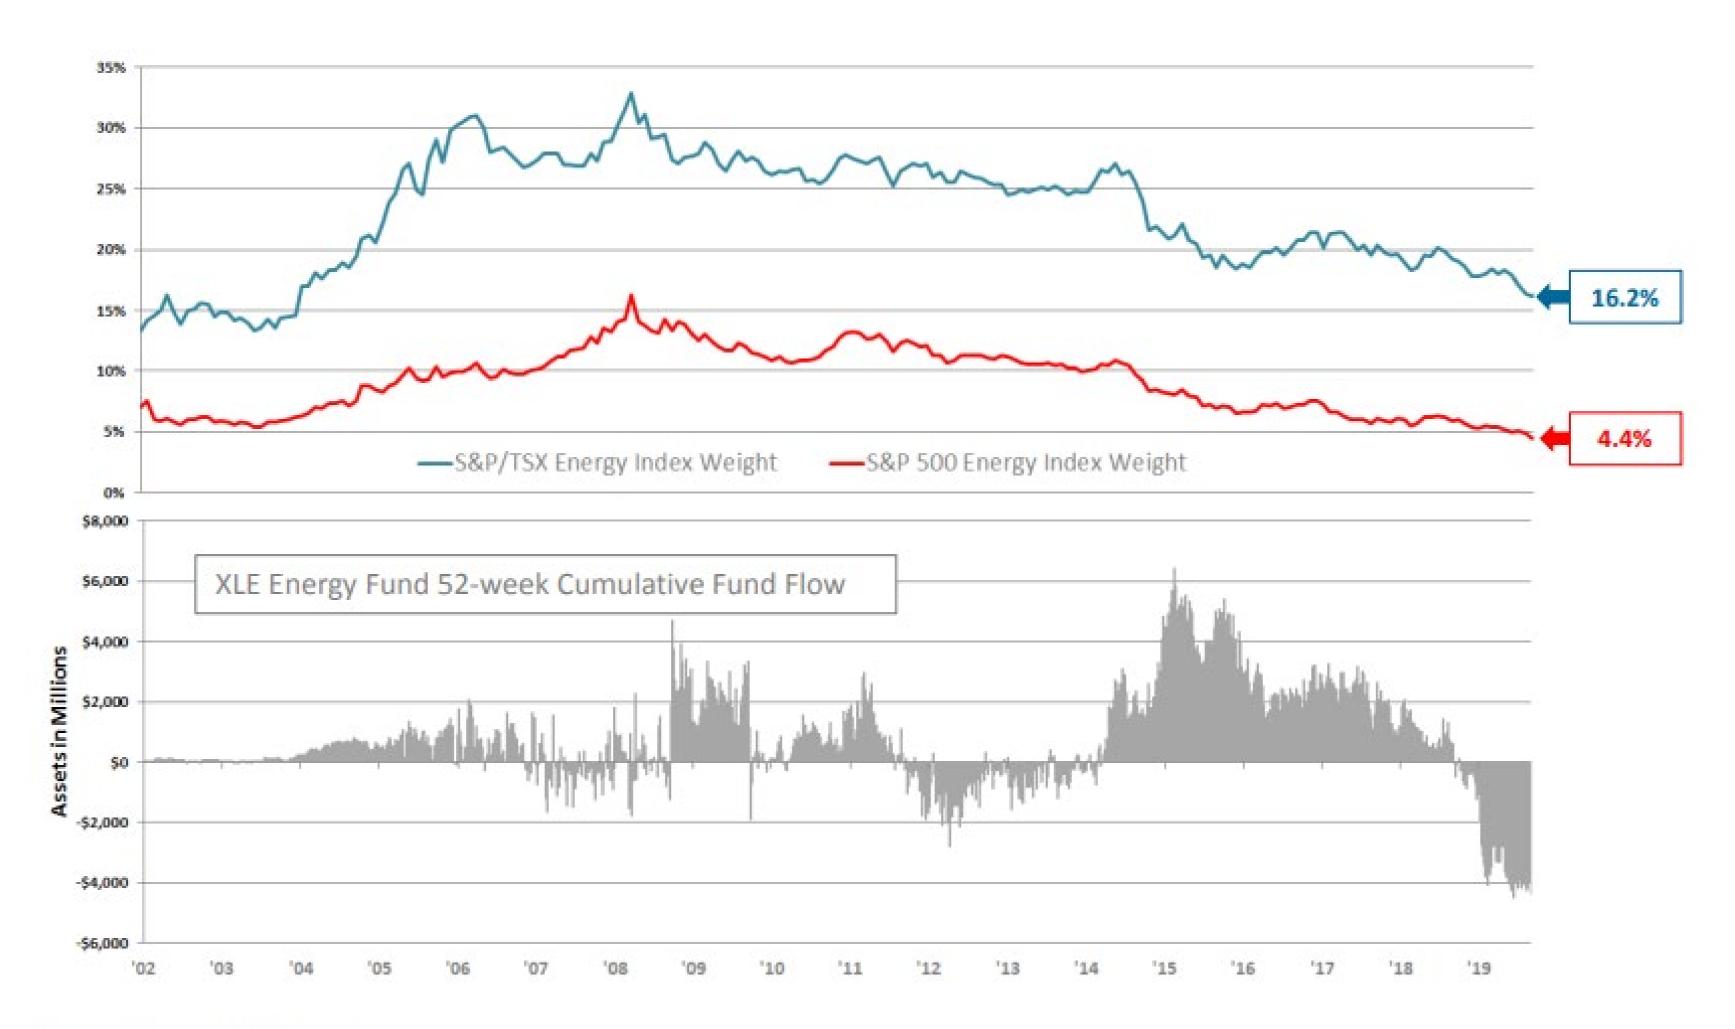

#### Oil and Gas

- Oil demand continues to grow annually between 1.2 to 1.8 million barrels per day
- Globally \$300 billion of oil investments have been cut
- OPEC "\$10 Trillion Investment needed to avoid Massive Price Spike"

### ••••• Linear Growth in Global Oil Demand

Source: Historical estimates are collected from iea. 2019 and 2020 estimates based on averages from OPEC, EIA, and iea, as of September 2019.

### •••• Global Decline Rate of Oil

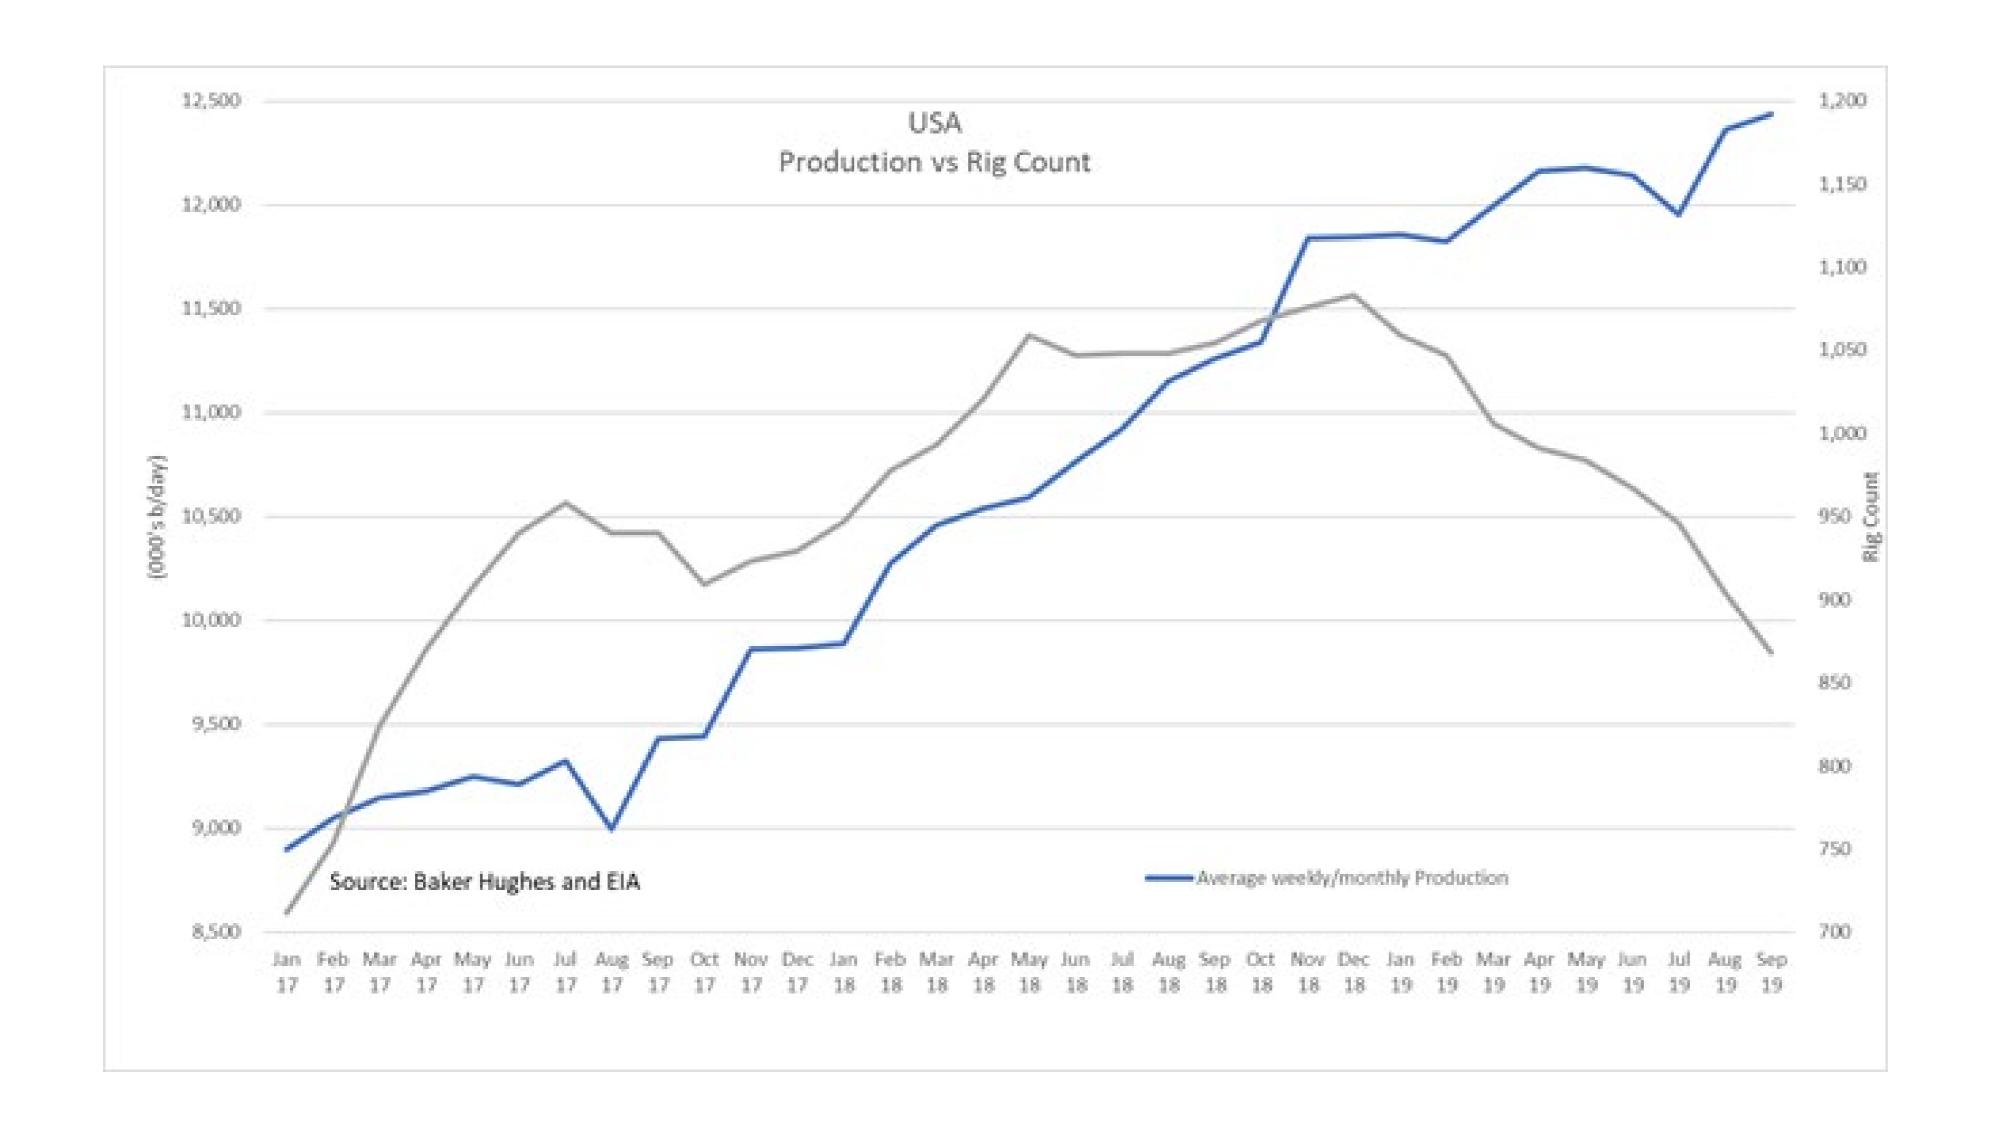

Based on an analysis of the production history of more than 1,600 conventional fields between 1950 and 2012, the IEA has estimated decline rates for a range of fields.

For fields which have passed their peak, observed output declined on average by 7% per year. Without investment, the production from a mature oil field would decline by around 9% per year according to the IEA.

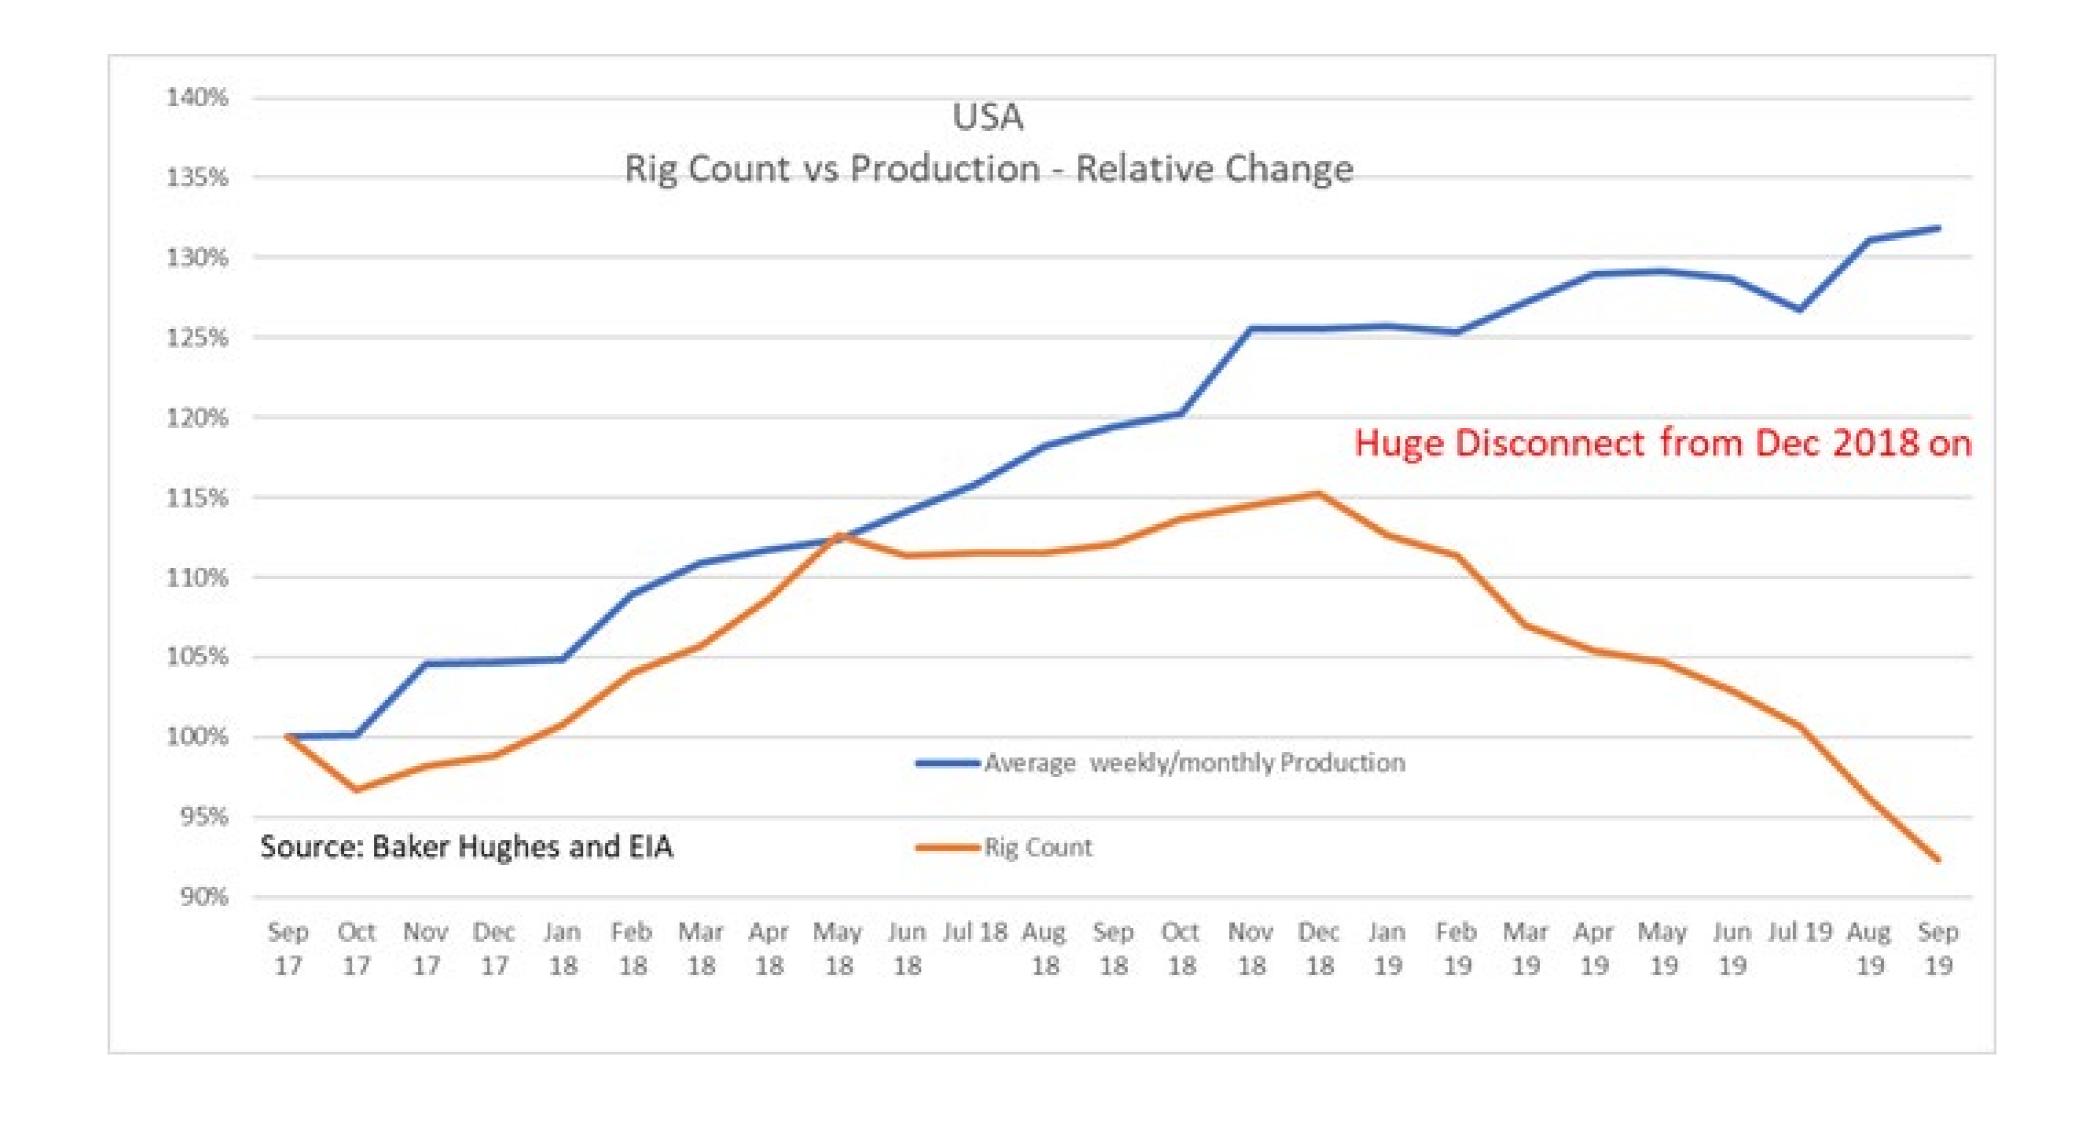

Long term production projects have been replaced by short term (up to 80% decline rates) shale projects.

To maintain current status quo the world must find new production of 8 to 9 million barrels per day every year.
